N2 Saver Feature: Includes Sitek's proprietary state-of-the-art N2 saver option. This feature saves customers thousands of dollars annually by preventing N2 waste while the tool is idle.

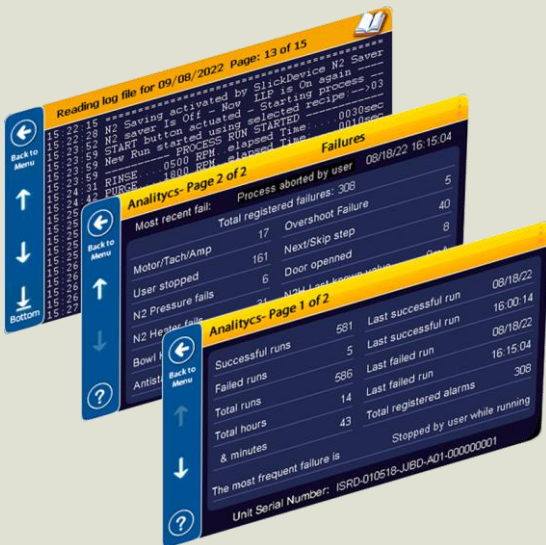

Advanced Diagnostic Tools: Maintenance modes allow users to quickly and effectively troubleshoot SRD conditions. Improved maintenance reduces downtime and intrusive investigation. No more removing system skins for basic troubleshooting

SECS/GEM: Factory Automation using High-Speed SECS/GEM through a 10/100/1000 Ethernet connection over TCP/IP protocol. Three operation modes. (SECS/GEM interface is offered as an option)

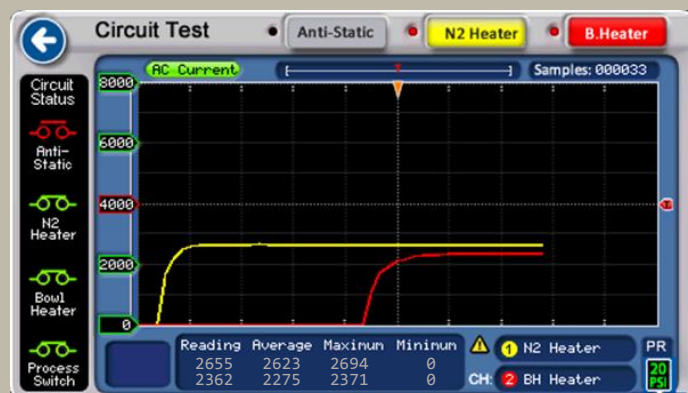

Analytics: Get insight from aggregated data and make actionable decisions to:

- Improve yield.
- Detect errors.
- Reduce manufacturing cost.
- Process optimization.
- Equipment health/maintenance.

Component Monitoring: The SlickDevice monitors components that are currently ignored. Ensuring N2 heater functionality makes water spotting and poor drying a thing of the past.
